Site: Rm. A10, B2, Interdisciplinary Research Building of Science and Technology Contact: Dr. Yuan-Chih Chang / Ms. Hui-Ju Huang Service: SPA, cryo-Tomography, liposome & polymer, etc

## Guidelines for sample grids

• In the TF20 workstation, the position for placing grid box is circular, so the user needs to use a circular grid box.

A 11 A

• Due to the limited operating space of the TF20 workstation, if 3 sample grids will be placed at a time, the user needs to **put all grids into one grid box**, and clearly remark the **sample names** and **placement order**.

As the operating time goes on, more ice crystals will grow, which not only <u>affects the vacuum status of TF20</u> but also <u>makes the sample dirty and is not good for data collection</u>. In addition, if there are several grid boxes in the same centrifuge tube, it is recommended to <u>put grid boxes with the higher priority of data collection at the top</u> for reducing the times that all grid boxes are exposed to air during operation.
